CVX: Matlab Software for Disciplined Convex Programming

In mathematical optimization theory, duality or the duality principle is the principle that optimization problems may be viewed from either of two perspectives, the primal problem or the dual problem.

Duality (optimization) - Wikipedia

In mathematics and computer science, an optimization problem is the problem of finding the best solution from all feasible solutions. Optimization problems can be divided into two categories depending on whether the variables are continuous or discrete.

Optimization problem - Wikipedia

Title: Tikhonov regularization of dynamical systems associated with nonexpansive operators defined in closed and convex sets

Optimization and Control authors/titles recent submissions

What is disciplined convex programming?¶ Disciplined convex programming is a methodology for constructing convex optimization problems proposed by Michael Grant, Stephen Boyd, and Yinyu Ye , . It is meant to support the formulation and construction of optimization problems that the user intends from the outset to be convex.

Introduction – CVX Users' Guide

1. Introduction. The optimal value or the best solution can be found through the optimization process. The optimization problems include looking for maximum or minimum value or using one objective or multi-objective.

A review of multi-objective optimization: Methods and its

See also. References. Mathematical optimization is very – mathematical. If you want performance, it really pays to read the books: Convex Optimization by Boyd and Vandenberghe (pdf available free online).

2.7. Mathematical optimization: finding minima of

Introduction to Optimization CS/ECE/ISyE 524, Spring 2017–18 University of Wisconsin–Madison. This course is an introduction to optimization from a modeling perspective.

CS/ECE/ISyE 524: Introduction to Optimization | Laurent

At first glance, SSMPC is a deterministic optimization problem with a large number of constraints. Due to the randomness of sampling N t realizations, the optimal solution $\{M^*, h^*\}$ to SSMPC itself is a random variable.

A data-driven robust optimization approach to scenario

We often think of optimization with momentum as a ball rolling down a hill. This isn't wrong, but there is much more to the story.

1.1.3. Lasso¶ The Lasso is a linear model that estimates sparse coefficients. It is useful in some contexts due to its tendency to prefer solutions with fewer parameter values, effectively reducing the number of variables upon which the given solution is dependent.
