Chemical Bonding II: Molecular Geometry and Hybridization

Molecular geometry is the 3-dimensional shape that a molecule occupies in space. It is determined by the central atom and the surrounding atoms and electron pairs. The shape of most molecules can be predicted using the Valence Shell Electron Pair Repulsion (VSEPR) method. This method states a few rules to help one determine the shape of a substance without using high technology methods such as ...

STUDY GUIDE AP Chemistry CHAPTER NINE- Molecular Geometry

Molecular Geometry is three dimensional arrangements of atoms containing molecule. The geometry determines different properties that includes reactivity, polarity, phase of matter, color, magnetism, and biological activity. To determine the geometry of molecular, there are various activities like spectroscopic methods and diffraction methods.
