The usual way of representing a bounded planar surface (facet) in computer graphic applications is as a sequence of vertices. Shading algorithms and ray-tracing generally requires knowledge of the normal to the facet, this is calculated by taking the cross product two of the edge vectors of the facet.

Polygons, Meshes - Paul Bourke - Personal Pages

Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals.

Marxism is a theory and method of working class self-emancipation. As a theory, it relies on a method of socioeconomic analysis that views class relations and social conflict using a materialist interpretation of historical development and takes a dialectical view of social transformation.

Marxism - Wikipedia

Dolphin is a common name of aquatic mammals within the order Cetacea, arbitrarily excluding whales and porpoises. The term dolphin usually refers to the extant families Delphinidae (the oceanic dolphins), Platanistidae (the Indian river dolphins), Iniidae (the new world river dolphins), and Pontoporiidae (the brackish dolphins), and the extinct ...
