Abstract. Centrifugal pumps are a most commonly used in different fields like industries, agriculture and domestic applications. Computational Fluid Dynamics is most commonly used tool for simulation and analysis. 3-D numerical CFD tool is used for simulation of the flow field characteristics inside the turbo machinery.

What a mode is. A mode is a combination of a deformed shape in which the structure will exchange kinetic-energy and strain-energy continuously, and the natural frequency at which the mode shape occurs.

In solid elements, linearization is done across the thickness to get the membrane stress (avg stress, wch is a horizontal line), bending stress (linear), and peak stress (the left over in the curve).

The meshing of the whole computational domain is performed using Ansys Workbench. Fine meshing

(minimum dimensionless grid size of 0.01) was chosen near the cylinder and near the adiabatic walls because variations in the velocity and temperature are expected to be higher in these areas; for the rest of the domain a relatively coarse mesh is used.
