ABSTRACT We treat the dynamic vehicle routing problem with time windows (DVRPTW) in the context of real-time traffic information. We integrate traffic information obtained in real time to change the speed profile according to the accidents on the road network (congestion, etc.).

Abstract: L4S and Diffserv offer somewhat overlapping services (low latency and low loss), but bandwidth allocation is out of scope for L4S. Therefore there is scope for the two approaches to complement each other, but also to conflict.

The text in which this occurs is called the gloss, and it is the text on the margins, which in the above example, nearly fills the page. The gloss is not the main text of the work, but rather a commentary on the meaning, interpretation or significance of the main text.
