Build electrical circuits using batteries, light bulbs, resistors, fuses, wires, and a switch. An ammeter, a voltmeter and an ohmmeter are available for measuring current, voltage and resistance throughout the circuit. The voltage of the battery and the precision of the meters can be adjusted. Multiple circuits can be built for comparison.

The analysis of a series RLC circuit is the same as that for the dual series R L and R C circuits we looked at previously, except this time we need to take into account the magnitudes of both  $X_L$  and  $X_C$  to find the overall circuit reactance.
